What is METATRONICS?

METATRONICS is an AI-powered crypto trading product that gives ordinary users access to systematic trading strategies through Telegram and/or Web through a simple deposit-based model. It is built for people who want passive exposure to algorithmic trading without managing trades themselves, and for network builders who want an active income path through referrals and team growth.

Build a network up to 10 levels deep!

You receive a percentage of actual income from:

- your direct partners (1st line);
- partners of your partners;
- and further — up to the 10th level of depth.

The higher the level — the higher your percentage.

All accruals occur daily in USDT.

How is income from depth opened?

Your personal deposit from 100 USDT opens access to income from the 1st line.

Every 1000 USDT of total volume opens 1 level of depth (up to 10 levels).

The depth of accrual depends on:

- your personal deposit;
- the volume of deposits of first-line partners.

Every 1000 USDT of total volume unlocks +1 level of depth.

Calculation example

- Your personal deposit: 3000 USDT
- First-line partner deposits: 2000 USDT
- Total volume: 5000 USDT

In this case, you open income up to the 5th line of depth.

Line	Percentage	Structure Turnover

Who is it for?

Passive Participants

Passive participants who want to deposit funds and earn from AI-driven trading activity.

Priced-Out Investors

Users priced out of traditional hedge funds or quant products who still want access to automated market strategies.

Active Partners

Active partners who want to build teams and earn from referral structure and performance-based bonuses.

Crypto Users

Looking for a simple model without lock-ups, trading complexity, or gamified mechanics.

How it works.

METATRONICS runs on a multi-layer trading system that ingests live exchange data, processes it through AI models, ranks opportunities, applies portfolio and risk controls, and then executes trades automatically across major exchanges.

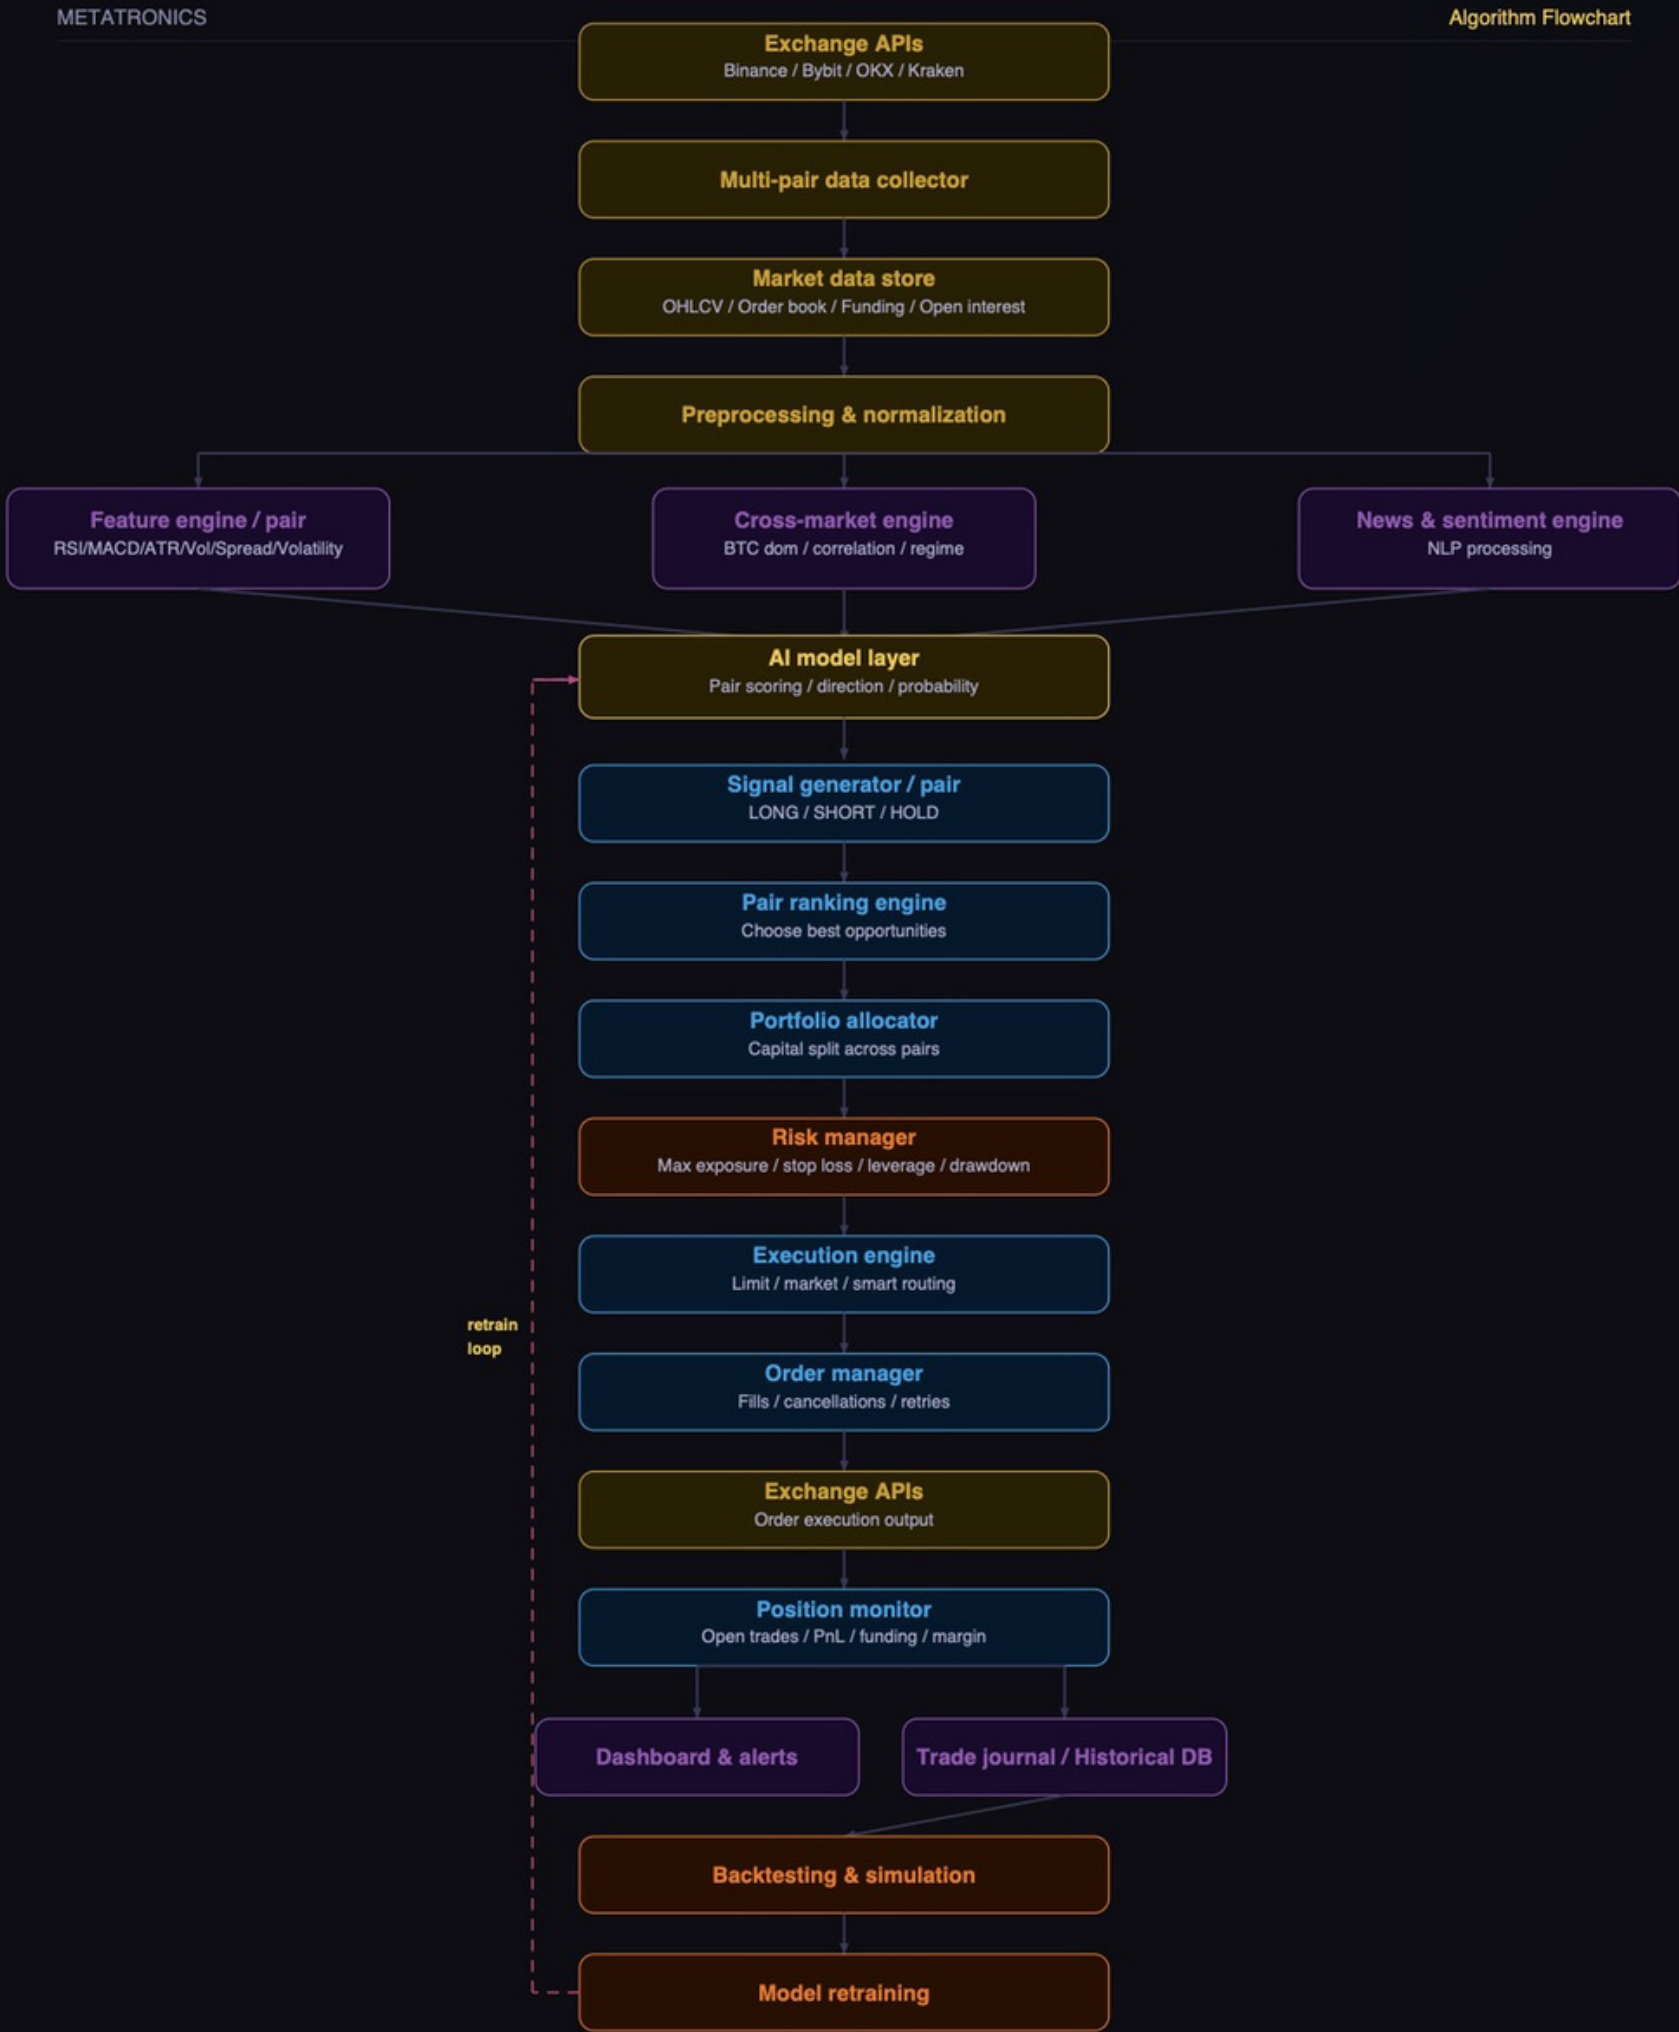

This follows the broad logic used in institutional systematic trading, where machine learning, portfolio construction, and execution quality sit at the core of the process.
